Skyprobes™ 17324 W. Woodlands Ave., Goodyear, AZ 85338 USA  
602-293-6844 - skyprobes1964@yahoo.com

## How to determine which SKYPROBES antenna connector will mate with your radio

1. One way is consult the manual that came with the radio, it may have what the connector is.
2. The second way is to go on the web with your radio model number and see if the technical information or the on-line manual of the radio has the antenna connector.
3. The third way, given here, is to unscrew the antenna that is on the radio and compare it with the photo below.

SMA(F)

SMA(M)

BNC(M)

TNC(M)

5/16-32 Stud w/plug

The connector type needed is below the photo. Note that the (M) units have an internal pin.

If you are questioning your choice, please call us at 1-602-293-6844 with the model number of your radio and we will define it for you.
